SUMMARY

Final-year Computer Science student (graduating May 2026, CGPA 9.5), Salesforce AI Associate certified, deep in LLMs and prompt engineering through hands-on agentic AI projects. Builds with AI-powered development tools like Cursor and Claude as a regular part of the workflow, not just for one-off questions comfortable using them to accelerate real feature work while still owning the code and reasoning behind it. Comfortable across React, TypeScript, JavaScript, Python, and Apex, with real experience designing how AI agents reason, call tools, and recover from failure. Communicates technical tradeoffs clearly to stakeholders, and is excited to build production agentic solutions directly with customers, owning outcomes end-to-end. Open to 25-50% travel.

EDUCATION

SRM Institute of Science and Technology

B.Tech CS & Engineering — AI/ML Major | CGPA: 9.5 / 10

Jun 2022 – May 2026

PROFESSIONAL EXPERIENCE

AI/ML Engineering Intern — IAAIC, Bengaluru (On-site)

Sep 2025 – Nov 2025

- Designed and fine-tuned Python-based AI services with prompt engineering at the core evaluated model outputs with structured criteria, iterated fast based on results, and presented technical tradeoffs clearly to cross-functional stakeholders.

Full Stack Development Intern — Opportive, Remote

Jul 2025 – Aug 2025

- Built full-stack features using React, JavaScript, and Python translated ambiguous business requirements into working solutions, collaborated daily with cross-functional teams, and adapted quickly to new tools and frameworks under time pressure.

AI / Backend Intern — Plasmid Innovation Pvt Ltd, Hyderabad (Hybrid)

Apr 2024 – Jun 2024

- Built backend AI/data pipelines in Python debugged production issues independently, documented architecture decisions, and worked directly with senior engineers to align technical approach with business needs.

KEY PROJECTS

Agentic AI Workflow Orchestration System | Python, LangChain, LangGraph, Prompt Engineering, Tool Calls, PostgreSQL

- Designed how a multi-agent system thinks the prompts, the reasoning steps, and the tool-call architecture. Hit a real reliability problem: agents calling external tools would sometimes fail mid-task with no clean recovery. Built a retry-with-fallback protocol that escalates to an alternate strategy instead of crashing, and persisted state so a recovered run resumes rather than restarts the same reliability bar production agentic solutions like Agentforce need, not just a working demo.

AI Interview Simulator | React, TypeScript, Python (FastAPI), WebSockets, Real-Time Infra

- Full-stack real-time application with a React/TypeScript front-end and Python backend communicating over WebSockets practical real-time infrastructure experience, plus the same frontend stack (React, TypeScript) this role runs on.

LLM-RAG Knowledge Assistant Platform | Python, FastAPI, FAISS, Prompt Engineering, Vector Embeddings

- Built a retrieval-augmented generation system and tuned prompt structure and retrieval chunking empirically against a held-out query set rather than guessing hands-on prompt engineering and output evaluation, the core skill this role is built around.

Salesforce Automation & GraphQL Integration | Apex, Salesforce Objects, GraphQL, Schema Design, Triggers

- Built an Apex trigger to auto-update a related record when a source field changed made it bulk-safe by batching related-record lookups/updates instead of looping per-record, avoiding Salesforce's governor limits on bulk operations. Separately designed a GraphQL API for a personal project, writing the schema and resolvers myself deciding what should be a queryable field versus a computed resolver was the real design work, not just wiring endpoints together.

TECHNICAL SKILLS

Core Languages: Python (expert), JavaScript, TypeScript, Apex, SQL, OOP fundamentals

Frontend: React, TypeScript, responsive UI, real-time interfaces (WebSockets)

Agentic AI & LLMs: LangChain, LangGraph, prompt engineering, tool-call architecture, multi-agent reasoning, RAG

AI Evaluation: Structured output evaluation, iterative prompt/model tuning, engineering-rigor testing of AI outputs

Backend & Data: FastAPI, REST APIs, GraphQL (schema/resolver design), PostgreSQL, FAISS, Salesforce Apex triggers

AI-Assisted Development: Cursor, Claude, VS Code, Codex used regularly to accelerate real feature development

Professional Skills: Consultative communication with technical and business stakeholders, fast iteration, ownership, comfort with ambiguity

CERTIFICATIONS

Salesforce AI Associate | Oracle Cloud Infrastructure 2025 Certified Generative AI Professional | AWS Cloud Practitioner Essentials | Workato Foundations Level 1 & 2 | Alibaba Cloud Big data Certified
